NOW THERE IS A WAY TO “PRE-SEASON” NEW SINGLE CONDUCTOR CABLES

Introducing DYSTATIC-SEASONING!

This revolutionary, patented pending process is now available.

- ***Removes the majority of the permanent stretch of the entire length thus greatly reducing the seasoning period***
- ***The cable diameter profile is reduced uniformly throughout the entire length of the cable***
- ***This uniform diameter profile reduces the uncertainty on the selection of flow tube sizes for better well head pressure control****
- ***Reduces the frequency of normalizing (tightening) of the cable throughout the cable life***
- ***DYSTATIC-SEASONING is widely accepted by the cased hole service companies with over 11,000,000 ft. in use***
- ***A final inspection report is provided listing the cable diameter before and after the DYSTATIC-SEASONING process which is recorded during the process by multiple state-of-the-art laser micrometers***
- ***DYSTATIC-SEASONING maintains the manufacturer’s warranty by never exceeding their maximum recommended working load***

We look forward to discussing DYSTATIC-SEASONING with you.

Please call at your convenience.

*Normal outer armor wear will eventually result in some tapering
